SUMMARY

Cybersecurity student at UW-Platteville with hands-on experience in threat intelligence automation, LLM security testing, risk management, software security, and ethical hacking. Builds practical security tools in Python and applies NIST and OWASP guidance to technical assessments. Active CTF competitor with leadership experience in safety-focused and fast-paced environments.

EDUCATION

Bachelor of Science, Cyber Security
University of Wisconsin-Platteville, Platteville, WI
Relevant Coursework: Software Security, Ethical Hacking, Operating Systems, Network Security, Database

Expected May 2027

TECHNICAL SKILLS

Languages & Data	Python, Java, SQL, C
Security & Analysis	Threat intelligence, IOC extraction, prompt injection testing, risk assessment, NIST SP 800-53, OWASP LLM Top 10, Zero Trust, network traffic analysis (Wireshark), AES-256 encryption
Tools & Platforms	Garak, Ollama, Hugging Face, Git/GitHub, CISA KEV, RSS/feed parsing

PROJECTS

- Automated Threat Intelligence & AI-Assisted Briefing**

Python · SQLite · Ollama

 - Built a six-stage pipeline that ingests CISA KEV and three security news feeds, normalizes and deduplicates records in SQLite, extracts indicators of compromise with regular expressions, and generates prioritized local-LLM briefings.
 - Processed 57 new items in a test run and summarized 25 items across five batches with no failed batches; kept exact IOC extraction outside the LLM to reduce hallucination and prompt-injection risk.
- Prompt Injection Security Assessment**

Garak · Hugging Face · Ollama

 - Tested GPT-2, Llama 3.2 1B, and Mistral 7B with Garak across jailbreak, prompt-hijacking, encoding, web-injection, data-exfiltration, and XSS-style probes.
 - Compared probe-level and weighted results to identify model-specific weaknesses, then translated findings into defense-in-depth recommendations aligned with OWASP guidance.
- Information Security Risk Management Project**

NIST SP 800-53

 - Developed a semester-long risk management plan for a nonprofit, inventorying 14 IT assets, defining recovery objectives, and assessing threats, vulnerabilities, controls, compliance requirements, and business impact.
 - Prioritized five high-risk scenarios and mapped mitigation recommendations to NIST SP 800-53 controls covering input validation, security testing, boundary protection, remote access, malware protection, and incident response.

EXPERIENCE

- Student Event Manager | University of Wisconsin-Platteville**

Sep 2024 – Present

 - Coordinate registration, A/V setup, and event logistics for university events while troubleshooting time-sensitive issues to keep operations running smoothly.
 - Support guests, staff, and event teams during live operations, adapting quickly when technical or logistical problems arise.
- Waterfront Director | United Church of Christ, Inc.**

May 2023 – Aug 2026

 - Supervised staff and volunteers and maintained safety compliance across waterfront activities and events.
 - Facilitated staff training on waterfront safety and leadership and led operational risk assessments to reduce the likelihood of incidents.

ACTIVITIES & LEADERSHIP

- Cybersecurity Club, UW-Platteville** – Regular CTF competitor applying practical security analysis, troubleshooting, and problem-solving skills.
- Robotics Club, UW-Platteville** – Collaborate on technical projects requiring iterative troubleshooting, teamwork, and attention to detail.
